Working Principle –

The grain to be cleaned falls on an inclined vibrating deck fitted with a custom made screen. Using positive air pressure, a fluidized bed is created on the screen. The difference in specific gravity of stones and grain causes the stone, which is heavier, to travel up the deck while the grain flows down the incline.

The benefits of Damodar Destoner are –

- Damodar Destoner guarantees 100% separation of stone of all sizes, even those smaller than the grain
- Damage to rubber rolls is prevented by removing the stones prior to husking
- Rigid steel construction for longevity and low maintenance
- Low power consumption
- Additional blower may be added for dust removal

All our machines carry DAMODAR guarantee of service & availability of spares

SPECIFICATION

Model	Motor Power		Dimension (in mm)		
	HP	RPM	Length	Width	Height
2 MT	2	1500	1600	1400	1750
2 MT with Dust blower	5	1500	2350	1400	1900
4 MT	3	1500	1800	1600	1850
4 MT with Dust blower	5	1500	2550	1600	2000
